

BANK MANAGEMENT SYSTEM USING C++

This project demonstrates a simple Bank Management System using C++ classes and objects. The program allows users to deposit, withdraw, and display account details.

Program Code:

```
#include <iostream>
using namespace std;

class Account {
private:
    string name;
    int accNo;
    double balance;
public:
    Account(string n, int a, double b) {
        name = n;
        accNo = a;
        balance = b;
    }

    void deposit(double amount) {
        balance += amount;
        cout << "Amount deposited successfully!" << endl;
    }

    void withdraw(double amount) {
        if (amount > balance)
            cout << "Insufficient balance!" << endl;
        else {
            balance -= amount;
            cout << "Withdrawal successful!" << endl;
        }
    }

    void display() {
        cout << "\nAccount Holder: " << name << endl;
        cout << "Account Number: " << accNo << endl;
        cout << "Balance: " << balance << endl;
    }
};

int main() {
    Account user("Monik", 1001, 5000);

    user.display();

    user.deposit(2000);

    user.withdraw(1500);

    user.display();

    return 0;
}
```

Sample Output:

Output

```
Account Holder: Monik  
Account Number: 1001  
Balance: 5000  
Amount deposited successfully!  
Withdrawal successful!
```

```
Account Holder: Monik  
Account Number: 1001  
Balance: 5500
```
